

BCCA Clinical Case Portfolio Rubric Examples

Ocular	Unacceptable	Disconnected	Convincing	Camouflage
	1	2	3	4
Overall	Prosthesis greatly disconnected from patient.	Prosthesis disconnected from patient. Photos inconclusive.	Prosthesis is convincing with minor issues. Differences related to existing medical condition. Clinically acceptable.	Prosthesis is camouflage. Excellent clinical Result.
Fit	Visibly too large or small for the socket. Realism greatly impacted due to problems with gaze, symmetry and projection. Highlights or flash not symmetrical.	Realism impacted due to problems with symmetry, gaze, and proportion. Prosthesis may be too large or small for socket. Photos inconclusive. Highlights or flash not symmetrical or inconclusive.	Palpebral fissures are mostly symmetrical with only minor differences. Gaze is matched. Clinically acceptable due to anatomical differences. Highlights or flash symmetrical within clinical acceptance.	Palpebral fissures are symmetrical. Gaze match is excellent. Excellent symmetry of highlights or flash.
Color	Color is greatly disconnected from the patient. No effort made to use multiple colors or match contralateral eye. Hue and/or value does not match clinically unacceptable.	Color disconnected from the patient. Some color variation apparent. Hue and/or value match is clinically unacceptable. Photos inconclusive.	Color match is convincing. Hue and value match is clinically acceptable.	Color match is camouflage. Hue and value match is excellent.
Anatomy	Anatomy not accurate. Asymmetry apparent. Greatly disconnected from the patient. No apparent effort to match patient anatomy. Iris and sclera inaccurate and do not match.	Anatomy not accurate. Asymmetry apparent. Disconnected from the patient due to problems with anatomical accuracy and match of iris or sclera. Photos inconclusive.	Minor issues with symmetry or anatomy issues related to compromise with existing anatomy or socket/lid pathology. Clinically acceptable due to anatomical differences. Size of irises are matched.	Anatomy is symmetrical and anatomically accurate. Iris match is excellent.
Production Quality	Issues with Craftsmanship. Surfaces not smooth. Porosity apparent. Impression technique unsafe.	Issues with craftsmanship. Intaglio surfaces with imperfections. Photos inconclusive.	Intaglio surfaces with no imperfections. Craftsmanship clear. Technical skill apparent.	Quality apparent in clean smooth intaglio surfaces. Craftsmanship clear. Technical skill apparent. Complex device well executed.

Silicone Prosthesis	Unacceptable	Disconnected	Convincing	Camouflage
	1	2	3	4
Overall	Prosthesis disconnected from patient.	Prosthesis with little connection to patient. Photos inconclusive.	Prosthesis is convincing with minor issues. Clinically Acceptable.	Prosthesis is camouflage. Excellent clinical result.
Fit	Visible edges, gaps, apparent pressure points. <i>No test socket for finger or toes of detailed cases.</i>	Visible edges to the casual observer. Gaps in the margins. Disconnected from the patient. Photos inconclusive. <i>No test socket for finger or toes of detailed cases.</i>	Convincing. Clinically acceptable due to anatomical differences. <i>Test socket demonstrates fit for finger or toes of detailed cases.</i>	Edges are camouflaged or not visible.. <i>Test socket demonstrates fit for finger or toes of detailed cases.</i>
Color	Color disconnects with patient. No effort made to use multiple colors.	Color disconnected from the patient. Some color variation apparent. Hue and/or value match is clinically unacceptable. Photos inconclusive.	Color match is convincing. Hue and value match is clinically acceptable.	Color match is camouflage. Hue and value match is excellent.
Anatomy	Anatomy not accurate. Asymmetry apparent. Disconnected from the patient. No effort to match patient anatomy.	Anatomy not accurate. Asymmetry apparent. Disconnected from the patient. Photos inconclusive.	Minor issues with symmetry or anatomy. Clinically acceptable due to anatomical differences.	Anatomy is symmetrical and anatomically sound.
Production Quality	Issues with craftsmanship. Intaglio surfaces rough. Jagged or torn edges. Tooling marks apparent. Impression technique unsafe.	Issues with craftsmanship. Intaglio surfaces with imperfections. Photos inconclusive.	Intaglio surfaces with very minor imperfections. Craftsmanship clear. Technical skill apparent.	Quality apparent in clean smooth intaglio surfaces. craftsmanship clear. Technical skill apparent.
